ESG Integration in the investment process

ESG integration is a core part of the investment process across our Infrastructure Debt strategies and, as with all other components of the investment process, is the responsibility of the investment team. When evaluating any investments, ESG risks and opportunities, which may have a material impact throughout the investment life-cycle, are fully considered alongside traditional investment approaches by the investment management team.

Our approach to integrating ESG within our investment process is outlined below:

Sourcing and screening	<ul style="list-style-type: none"> • Initial ESG assessments are performed to try to identify any ESG "deal breakers" or any issues that require more extensive due diligence. • Analysis helps inform decisions on whether to progress the investment opportunity or not. • Analysis may include desktop reviews of key project documents, such as planning permission conditions and Environmental Impact Assessments. • For greenfield projects, ESG considerations are factored into the design process and project planning.
Due diligence	<ul style="list-style-type: none"> • ESG risk assessments are undertaken for all new investments. This includes the use of proprietary ESG Questionnaire toolkits. It may also include reviews from external consultants and site visits. • We aim to identify and quantify the financial impacts of material ESG risks and integrate these into valuation models as appropriate. • This may include the identification of the counterparty who we believe is best placed to manage any relevant ESG risks, and due diligence on the lead sponsor when investing as a debt provider.
Investment committee approval	<ul style="list-style-type: none"> • Material ESG risks and opportunities are documented throughout the investment process and, where appropriate, discussed with the relevant Investment Committee. • Recommendations will be made using a reasonable and considered professional judgment based on the information and data available. • BlackRock Real Assets will not invest if the relevant Investment Committee determines that any ESG risks cannot be sufficiently quantified or mitigated.
Measurement and monitoring	<ul style="list-style-type: none"> • We establish, where appropriate, ESG key performance indicators to assist in ongoing risk management and help drive continual improvements in our ESG performance. • We also aim to measure and monitor the environmental performance and impacts associated with our investments. • Where appropriate, we include ESG updates and information in our client reporting.

Next steps and further developments

Blackrock joined the Net Zero Asset Managers Initiative (NZAMI) and anticipates that by 2030, at least 75% of corporate and sovereign assets managed on behalf of clients will be invested in issuers with science-based targets or equivalent.
