### Engagement

Is being considered

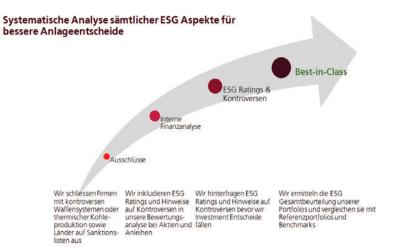

### **ESG** inclusion of Asset Management

Our customers' sustainability requirements are evolving at an enormous pace. We understand the importance of meeting these requirements and assessing the risks and opportunities associated with the transition to a sustainable world. We systematically integrate ESG aspects into our investment process, through exclusions, intensive analysis incorporating ESG characteristics, and continuous monitoring measures.

#### Systematic integration of ESG factors into our investment process

Our main steering body is the SRAM ESG Committee, headed by our Chief Investment Officer. It defines the overall ESG investment policy and monitors its implementation. The ESG Committee also defines thresholds, indicators, exceptions and the practical implementation of the overall SRAM ESG approach. This committee is also responsible for identifying unit-specific needs for ESG-related operational infrastructure and initiates projects to support and accelerate the development and implementation of the ESG approach.

See further: https://www.swiss-rock.ch/en/company#regulations

### Next steps and further developments

We are continuously working to integrate ESG aspects even more effectively into our investment analysis, investment strategies and portfolio construction processes, drawing not only on our own experience and analysis, but also following advances in scientific financial market research and regulation. We recognize that this fundamental evolution presents challenges to the market. Transparency requirements and the comparability of the data provided will be of even greater concern to us in the future. However, as markets and our processes evolve, we want to ensure that clients seeking more targeted ESG solutions can benefit from our insights.
